

### **Listing of Claims**

1-3. (Canceled)

4. (Currently amended) An automatic material handling system, comprising:

a rail;

an overhead shuttle, moved on the rail; and

a stocker, comprising a body, a plurality of cells, an in/out port (I/O port) and a transport

device, wherein the cells and the in/out port (I/O port) are disposed in the body,

and the transport device transports the goods between the cells and the I/O port;

wherein the rail passes through the body and overlaps the I/O port,

wherein the transport device directly removes the goods from the overhead shuttle or

directly places the goods into the overhead shuttle when the overhead shuttle travels to the I/O port.

5-6. (Canceled)

7. (Original) The automatic material handling system as claimed in claim 4, wherein the I/O port is disposed in an upper portion of the stocker, and the rail passes through the upper portion of the stocker.
